How can we help stop global warming?

Cows making methane.

Stop eating cows because if YOU like them there and that means that your killing them and the farms will give them bad food and that means that they will make bad METHANE!

TURN VEGAN

STOP

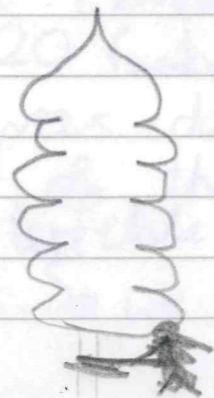

GLOBAL

WARMING

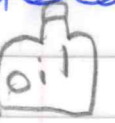

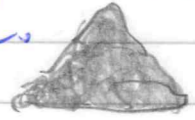

Palm oil deforestation

Don't cut down the trees because trees give us oxygen and without that we will not survive!

Fossil fuels for energy

Don't use the internet (W.W.W) because that means you are killing our world and the government could ban steam engines using coal.

Pollution from cars and factories you could walk more, avoid planes and walk shorter distances, or use electric cars.

Oil used for plastic

You could recycle more and stop use paper straws and stop shops selling oil used for plastic.
